Feedback

Revision required
(See Project Clickup site for submission deadline)

The project is acceptable for a final year project, and section 4 captures the requirements adequately
However, unless I have missed this, you did not specify that your processing platform will be an embedded platform. This should be indicated clearly in section 4.
You may use a PC for display, but core processing may not be on a PC platform

Symbol awarded: A

To be completed by the student

1. Project description

What is your project about? What does your system have to do? What is the problem to be solved?

Augmented reality is a powerful tool to interact with computer interfaces in a natural environment using intuitive human gestures. This project aims to implement a real-time system that can recognize the gestures and positions of a human user's hand and interpret them as different input commands to a virtual object that is instantiated in a live video feed. The system has to recognize the hand gestures and match them against a collection of known gestures and associated virtual object commands. The system must apply the relevant commands to the virtual object in real time with no discernable delay to the user. The virtual object can be handled by the user - moved in multiple directions and rotated in the context of the environment surrounding the user. The virtual object must also interact with the environment it is projected into so that it does not merely float against the background but instead rests on a surface and cannot be pushed through objects in the video stream - like a real 3D object would not be able to be pushed through a solid object.

2. Technical challenges in this project

Describe the technical challenges that are *beyond* those encountered up to the end of third year and in other final year modules.

2.1 Primary *design* challenges

2.2 Primary *implementation* challenges

platform will be an embedded processing platform

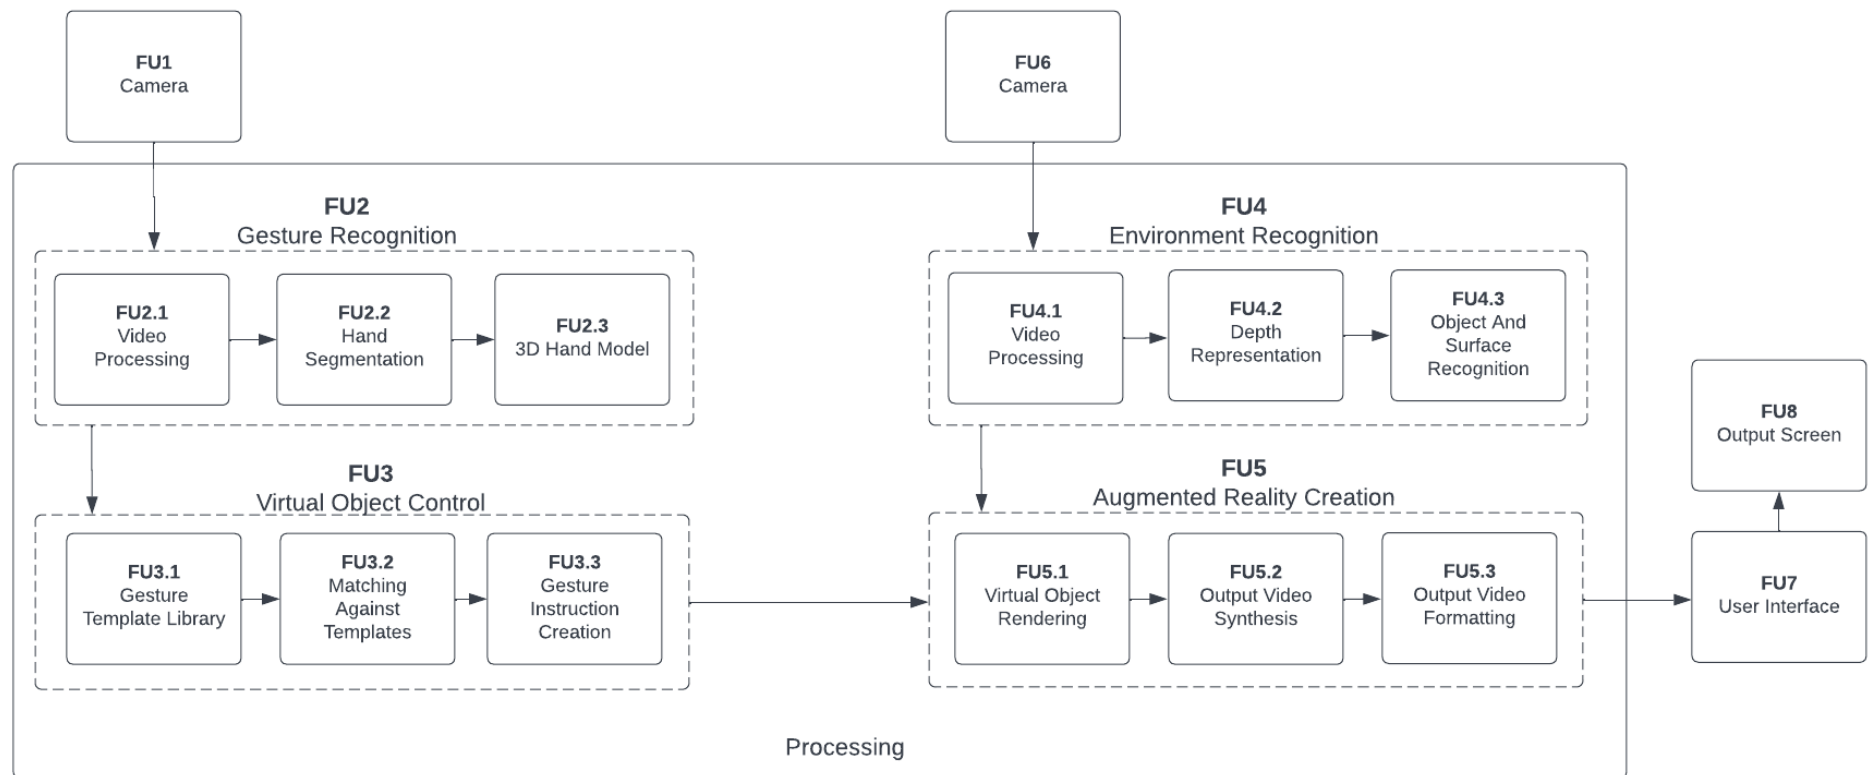

3. Functional analysis

3.1 Functional description

Describe the design in terms of system functions as shown on the functional block diagram in section 3.2. This description should be in *narrative format*.

3.2 Functional block diagram

4. System requirements and specifications

These are the core requirements of the system or product (the mission-critical requirements) in table format IN ORDER OF IMPORTANCE. Requirement 1 is the most fundamental requirement.

	Requirement 1: the fundamental functional and performance requirement of your project	Requirement 2	Requirement 3
1. Core mission requirements of the system or product. Focus on requirements that are core to solving the engineering problem. These will reflect the solution to the problem.			
2. What is the target specification (in <i>measurable</i> terms) to be met in order to achieve this requirement?	<div></div> why? ✓	✓	✓
3. Motivation: <i>how or why</i> will meeting the specification given in point 2 above <i>solve the problem</i> ? (Motivate the <i>specific</i> target specification selected)	<div></div> why? <div></div>		
4. How will you demonstrate at the examination that this requirement (point 1 above) and specification (point 2 above) has been met?			
5. Your own design contribution: what are the aspects that <i>you will design and implement yourself</i> to meet the requirement in point 2? If none, <i>remove this requirement</i> .			
6. What are the aspects to be taken off the shelf to meet this requirement? If none, indicate "none"	<div></div> <div>what do you mean? ONLY basic low level operations may be done with assistance of libraries.</div>		

what is you processing platform?

System requirements and specifications page 2

redundant requirement

	Requirement 4	Requirement 5	Requirement 6
1. Core mission requirements of the system or product. Focus on requirements that are core to solving the engineering problem. These will reflect the solution to the problem.			
2. What is the target specification (in <i>measurable</i> terms) to be met in order to achieve this requirement?	✓	✓	
3. Motivation: <i>how or why</i> will meeting the specification given in point 2 above <i>solve the problem</i> ? (Motivate the <i>specific</i> target specification selected)			
4. How will you demonstrate at the examination that this requirement (point 1 above) and specification (point 2 above) has been met?			
5. Your own design contribution: what are the aspects that <i>you will design and implement yourself</i> to meet the requirement in point 2? If none, <i>remove this requirement</i> .			
6. What are the aspects to be taken off the shelf to meet this requirement? If none, indicate "none"			

5. Field conditions

These are the REAL WORLD CONDITIONS under which your project has to work and has to be demonstrated.

	Field condition 1	Field condition 2	Field condition 3 ✓
Field condition requirement. In which field conditions does the system have to operate? Indicate the one, two or three most important field conditions.			
Field condition specification. What is the specification (in measurable terms) for this field condition?			

6. Student tasks

6.1 Design and implementation tasks

List your primary design and implementation tasks in bullet list format (5-10 bullets). These are *not* product requirements, but *your* tasks.

You may not write in the imperative form

6.2 New knowledge to be acquired

Describe what the theoretical foundation to the project is, and which new knowledge you will acquire (*beyond* that covered in any other undergraduate modules).
